Fernhill Microbiome Labs

Gut health testing (invented company)

Gut Wellness Profile

A snapshot of your gut health and what to do next.

Prepared for Sample Patient C | Report FM-7720-Q1 | Sample received 14 Oct 2025

Invented sample report for demonstration only. Not a real laboratory or patient.

Your Gut at a Glance

Your gut bacteria are shaped by what you eat and how you live. This report shows your unique gut landscape and gives personal tips to support your mood, defences, energy and digestion.

A healthy gut supports

- Mood and calm
- Strong defences
- Steady energy
- Easy digestion
- Restful sleep
- Regular bowels

A note from our CEO

Welcome to Fernhill! We are committed to turning gut science into clear, useful insights. Retest every 3 to 6 months to see how your gut changes over time. Thank you for trusting us with your health.

Dr Alex Moreno, Chief Executive (invented)

Your Scores Overview

Gut Age Estimate

41

Your Variety Index

2/10

POOR | GOOD | GREAT

Your Group Ratio

LOW | OPTIMUM | HIGH

Your Harmony Indicator

9/10

Your Top Gut Goals

Support Variety

Builds overall resilience, digestion and immune balance.

Based on your result

Poor Variety Index

What to do

- Eat about 30 different plant foods a week.
- Add fermented foods and prebiotic fibre every day.

Support Defence Balance

Helps the body manage stress on cells and keep inflammation in check.

Based on your result

Poor Antioxidant Pathway score

What to do

- Eat colourful, antioxidant-rich whole foods.
- Cut back on processed foods and alcohol.

Support Mind-Gut Link

Helps stress response, mood, sleep quality and mental clarity.

Based on your result

Poor Calm Signal score
Poor Mood Signal score

What to do

- Eat more fibre and nutrient-dense foods.
- Sleep 7 to 8 hours in a dark, cool room.

Your Gut Age Estimate

Your gut age is estimated from the types of bacteria in your gut, which naturally shift as we age. It can change with recent diet, lifestyle or supplements.

Your gut is 3 years younger than your actual age.

Your Functional Scores

Scores run from 1 to 10 and come from bacteria levels and key functions.

Mind-Gut Link

2

Defence Balance

4

Energy Balance

5

Nutrient Processing

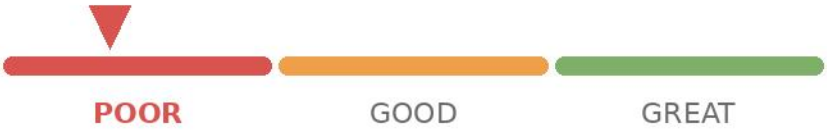

10

Your Variety Index

Shows how many different kinds of bacteria live in your gut. A more varied gut is usually more resilient and better at supporting digestion and defences.

2/10

POOR

Fewer kinds of bacteria are present. The gut may find it harder to recover from stress or diet changes.

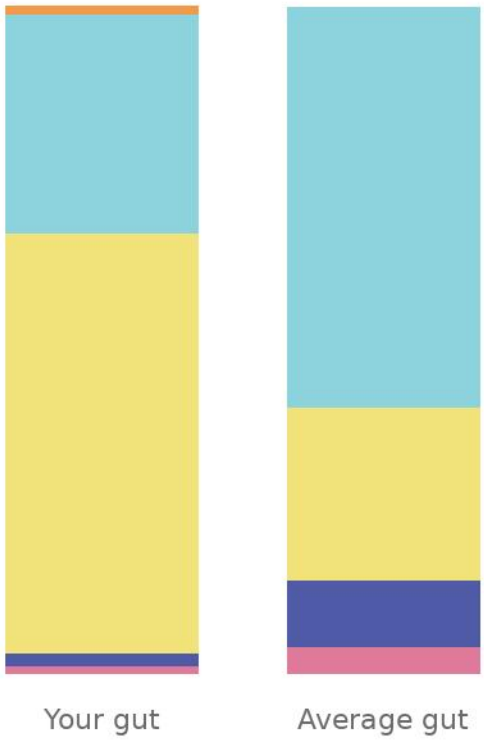

GOOD / GREAT

A varied, resilient gut gives a strong base for overall gut health.

Your Gut Composition

The main bacteria groups in your gut compared with an average healthy gut.

- **Group Alpha**
- **Group Beta**
- **Group Gamma**
- **Group Delta**
- **Others**

Your Group Ratio

Compares two major groups of gut bacteria (Group Gamma and Group Delta) that influence how your body uses energy and handles inflammation.

LOW RATIO

More Group Delta and less Group Gamma. May mean less energy is taken from food.

OPTIMUM RATIO

A balanced gut that supports healthy energy use and calm inflammation.

HIGH RATIO

More Group Gamma and less Group Delta. Linked to changes in fat storage.

Your Harmony Indicator

Compares helpful bacteria with less helpful ones. A harmonious gut supports steady gut function.

9/10

GREAT

Your gut is well balanced, with plenty of helpful bacteria and controlled less helpful ones.

Your Dietary Recommendations

Foods chosen for your lower-scoring pathways, plus ones that keep strong pathways in good shape.

Mind-Gut Link

2
POOR

- R — Red capsicum
- F — Flaxseed
- A — Apple

Defence Balance

4
POOR

- B — Blueberries
- S — Spinach
- P — Pumpkin seeds

Energy Balance

5
GOOD

- R — Rolled oats
- L — Lentils
- C — Cinnamon

Nutrient Processing

10
GREAT

- K — Kefir
- W — Wheat bran
- G — Garlic

Mind-Gut Link: Overview

This pathway looks at how your gut talks to your brain, which influences mood, stress response, focus and thinking.

Mind-Gut Link - Overall Score

2 /10

What is influencing this score

Calm Signal

Stress management

Your Calm Signal score is poor!

The bacteria linked to this signal are present in low amounts, which gives a poor score.

Low levels can make it harder to stay calm, sleep well and manage stress.

Mood Signal

Mood regulation

Your Mood Signal score is poor!

The bacteria linked to this signal are present in low amounts, which gives a poor score.

Low levels can make it harder to stay calm, sleep well and manage stress.

Lifestyle Factors That Help Your Gut

Your gut responds to how you live as well as what you eat.

Diet

Aim for about 30 different plant foods a week. Choose whole foods, use less oil and sugar, and limit processed foods.

Exercise

About 30 minutes of movement a day, such as walking or cycling, supports helpful bacteria and digestion.

Stress

Even 10 minutes of breathing exercises or quiet time can ease stress and support your gut-brain link.

Sleep

Aim for 7 to 9 hours of quality sleep so your gut can recover and your defences stay strong.

Important Notes

This gut test is a non-diagnostic wellness and lifestyle assessment. It does not diagnose, treat or prevent any condition. Please talk to your doctor before making big changes to your diet or health routine.

All names, scores and people in this report are invented for a software demonstration.
